IV. Read the following passage. Decide if the statements from 24 to 27 are True or False, and choose the correct answers for questions 28 and 29. (1.5 pts.)

HỌC SINH KHÔNG ĐƯỢC VIẾT GÌ VÀO PHÁCH NÀY

Recycling is very important in our lives because the waste we create is increasing all the time. The rise in population means that there are more people on the planet to create waste. New packaging are being developed, but much of these products contain materials that are not eco-friendly. New lifestyle changes, such as eating fast food, means that we create additional waste that isn't recyclable. Recycling helps to decrease the pollution caused by waste. It reduces the need for raw materials so that the rainforests can be preserved. Huge amounts of energy are used when making products from raw materials. Recycling requires much less energy which helps to preserve natural resources. We should always remember that making products from raw materials costs much more than if they were made from recycled products.
